

All About 3D Shapes - What is a Sphere?

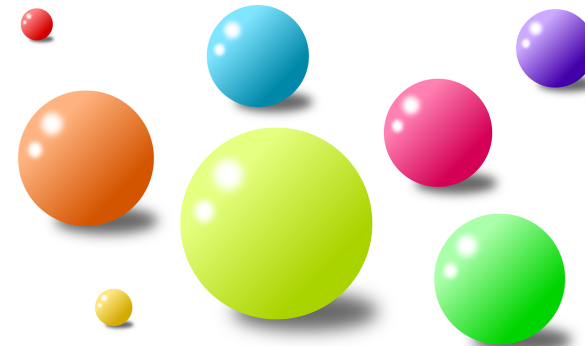

A sphere is a 3-dimensional shape like a ball. It is perfectly rounded all the way around. It rolls all around.

Spheres are everywhere. Can you find a sphere/ball shape somewhere?

All points on the surface of a sphere have the same distance to the center of the sphere. This distance is called the radius of the sphere.

Spheres can be big or little. Spheres can be any color.
